

Carbon brushes and gliding shoes Click Ductor CL7

CL7-7-35/GS

Gliding shoe with wheel set for type 'GS'-collector trolleys

Product information

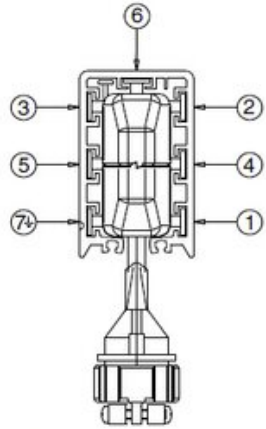

General:

The collector trolleys are supplied as standard with carbon brushes for 35A, positioned according to the product drawing and table. The brushes in positions 4 and 5 are both fitted as double brushes ("twin brushes"). Twin brushes are smaller than the others and their capacity is 35A per set. Advantages of this construction are a perfect balanced collector trolley. Gliding shoes can very easily be mounted to the collector trolley by means of a dovetail construction. Per collector trolley 4 gliding shoes are required.

There are special gliding shoes available for high-speed applications (suffix './GS').

Code	CARBON BRUSH TYPES Application	CARBON BRUSH TYPES Brush position in collector trolley	Standard carbon brushes for normal conductors
1411021	Phase brush** norm.	1,2,3 and 6	K91P
